Discrete Mathematics II Set Theory

DPP-08

[MSQ]

1. The set of all positive rational numbers forms an abelian group under the composition * defined by a * b = (ab)/2.

Which of the following is/are TRUE?

- (a) The identity element is 2
- (b) The inverse of a is 4/a.
- (c) The inverse of 4 is 1
- (d) the identity element is 1

[MSQ]

2. Let r be the set of all real numbers and * is a binary operation defined by

$$a * b = a + b + ab$$
.

Which of the following is TRUE?

- (a) Identity element is 0.
- (b) the inverse of -1 is 1.
- (c) The inverse of a is -a/(a + 1).
- (d) R is not a group.

[MCQ]

3. The set $G = \{0, 1, 2, 3, 4, 5\}$ is a group with respect to addition modulo 6.

Which of the following is false?

- (a) The inverse of 2 is 4
- (b) The inverse of 3 is 3
- (c) The inverse of 5 is 2
- (d) The inverse of 1 is 5

[NAT]

4. $G = \{1, -1, i, -i\}$ is a group w.r.t multiplication. The order -i is

[MCQ]

- **5.** If G is a group of order p, where p is a prime number. Then the number of sub groups of G is____.
 - (a) 1
- (b) 2
- (c) p-1
- (d) p

Answer Key

(a, b, c) 1.

(a, c, d)

3. (c)

4. (4) 5. (b)

Hints and Solutions

1. (a, b, c)

Let e be the identity element.

$$\therefore$$
 a * e = a

$$\Rightarrow$$
 (ae/2) = a

$$\Rightarrow$$
 e = 2

:. Option (a) is true and option (d) is false.

Let
$$a^{-1}$$
 = inverse of a

$$a * a^{-1} = e$$

$$\Rightarrow \frac{a \times a^{-1}}{2} = 2$$

$$\Rightarrow$$
 $a^{-1} = \frac{4}{a}$

Inverse of
$$4 = \frac{4}{4}$$

.. Option (b) and (c) are true.

2. (a, c, d)

Let e be the identity element.

$$\therefore$$
 a * e = a

$$\Rightarrow$$
 a + e + a. e = a

$$\Rightarrow$$
 e = 0

Let a^{-1} = inverse of a

$$a * a^{-1} = e$$

$$a + a^{-1} + aa^{-1} = 0$$
 (\therefore 0 is identity element)

$$\implies \quad a^{-1} = \frac{-a}{a+1}$$

 \therefore Inverse of -1 does not exist.

Hence, Option (b) is false.

3. (c)

$$5 \oplus_6 2 = 1$$

 \Rightarrow Inverse of 5 is not 2.

4. (4)

Order of (-i) = 4, because the smallest integer n such that $(-i)^n = 1$ is n = 4

5. (b)

Let (H, *) be a subgroup of order n, By Lagrange's theorem,

$$\Rightarrow$$
 n is a divisor of p

$$\Rightarrow$$
 n = 1 or n = p

$$\Rightarrow$$
 H = {e} or H = G

:. G has only 2 trivial subgroups
